

# AI Doctor - Patient Summary

## \*\*AI DOCTOR HEALTH REPORT\*\*

### \*\*PATIENT INFORMATION\*\*

- Age: 25
- Medical History: Diabetes (type not specified)

### \*\*SYMPTOMS\*\*

- Fever
- Headache
- Body pain

### \*\*VITAL SIGNS\*\*

- Blood Pressure: 140/90 mmHg
- Heart Rate: 85 bpm
- SpO<sub>2</sub>: 98%

### \*\*RISK ASSESSMENT\*\*

- Moderate

### \*\*RECOMMENDED TESTS\*\*

- Complete Blood Count (CBC)
- C-reactive protein (CRP) / Erythrocyte Sedimentation Rate (ESR)
- Blood glucose (fasting and postprandial)
- Urinalysis (including ketones)
- COVID-19 PCR or rapid antigen test
- Malaria rapid test (if epidemiologically relevant)
- Liver and renal function panel

### \*\*SUGGESTED SPECIALIST\*\*

- Infectious Disease Physician
- Endocrinologist (for diabetes management)

### \*\*CLINICAL NOTES\*\*

- The patient presents with systemic symptoms suggestive of an acute infectious process (viral or bacterial).
- Elevated BP (140/90 mmHg) may be stress-related but warrants monitoring, especially in the context of diabetes.
- No respiratory compromise (SpO<sub>2</sub> 98%).
- Immediate symptomatic care (antipyretics, adequate hydration) is advised while awaiting test results.
- Tight glycemic control is crucial; monitor blood glucose closely and adjust diabetic therapy if needed.
- Re-evaluate BP and HR after fever resolves; consider lifestyle counseling if hypertension persists.
